John-Doe-The-Tester doesn't have any public repositories yet.

In Github I'm gonna create a new repository,

after that,

I'm gonna share the project from my intellij to this repository

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)

Owner *

 John-Doe-The-Tester ▾

Repository name *

/ smoke-test-johndoe ✓

Great repository names are short and memorable. Need inspiration? How about [shiny-octo-tribble?](#)

Description (optional)

☒  **Public**

Anyone on the internet can see this repository. You choose who can commit.

☐  **Private**

You choose who can see and commit to this repository.

Initialize this repository with:

Skip this step if you're importing an existing repository.

☐ **Add a README file**

This is where you can write a long description for your project. [Learn more.](#)

☐ **Add .gitignore**

Choose which files not to track from a list of templates. [Learn more.](#)

☐ **Choose a license**

A license tells others what they can and can't do with your code. [Learn more.](#)

Copy the URL of the new repo

Quick setup — if you've done this kind of thing before

[Set up in Desktop](#)

or

[HTTPS](#)

[SSH](#)

<https://github.com/John-Doe-The-Tester/smoke-test-johndoe.git>

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).

...or create a new repository on the command line

```
echo "# smoke-test-johndoe" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin https://github.com/John-Doe-The-Tester/smoke-test-johndoe.git
git push -u origin main
```

...or push an existing repository from the command line

```
git remote add origin https://github.com/John-Doe-The-Tester/smoke-test-johndoe.git
git branch -M main
git push -u origin main
```

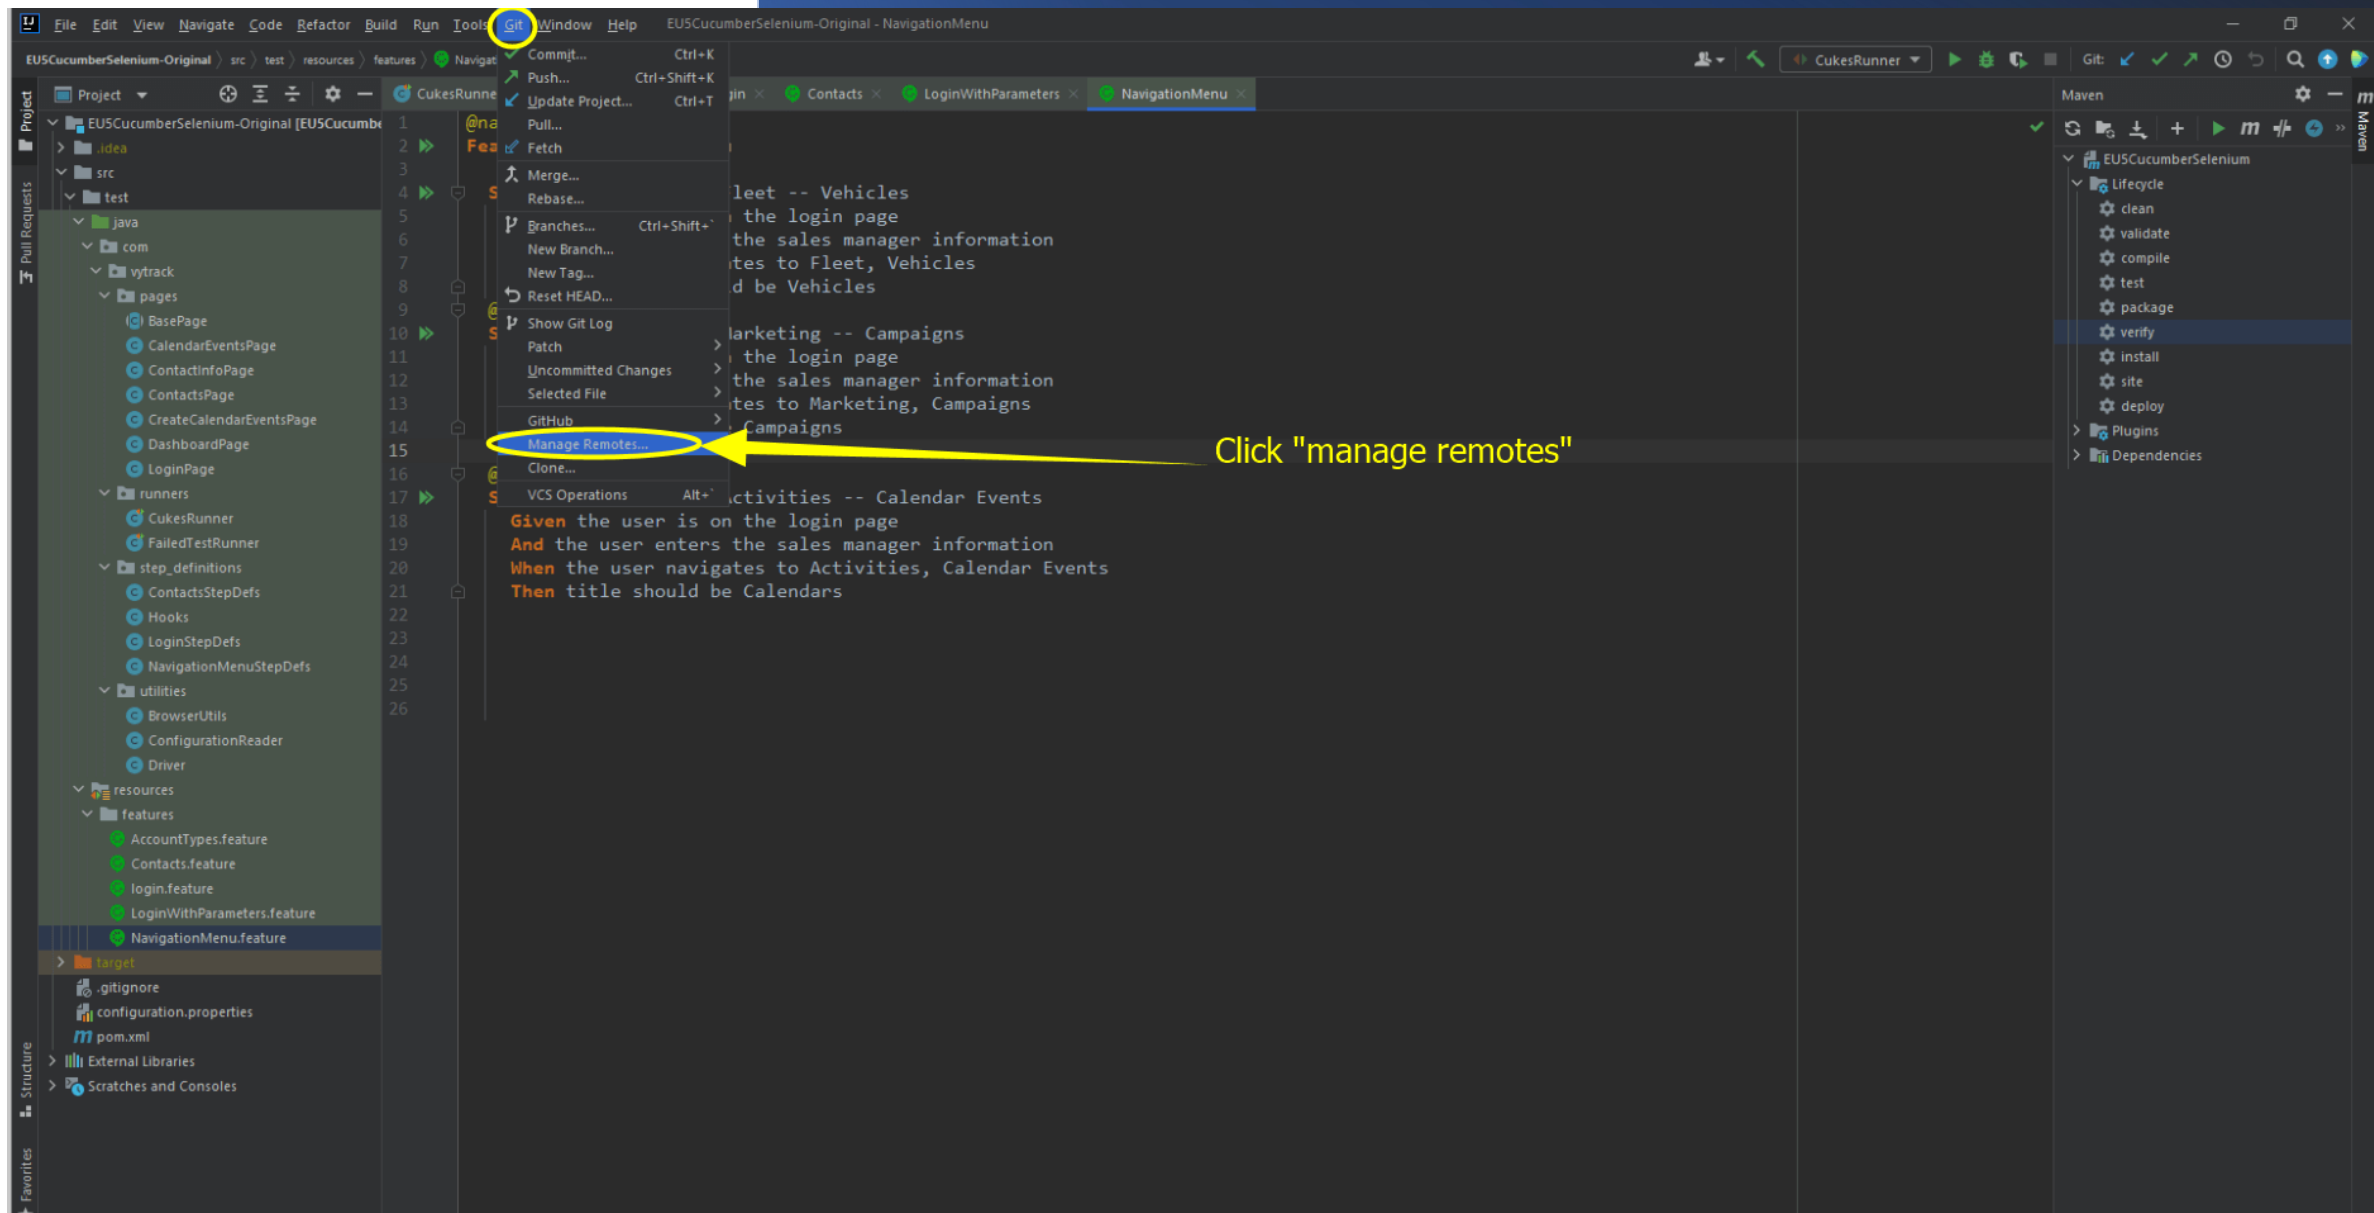

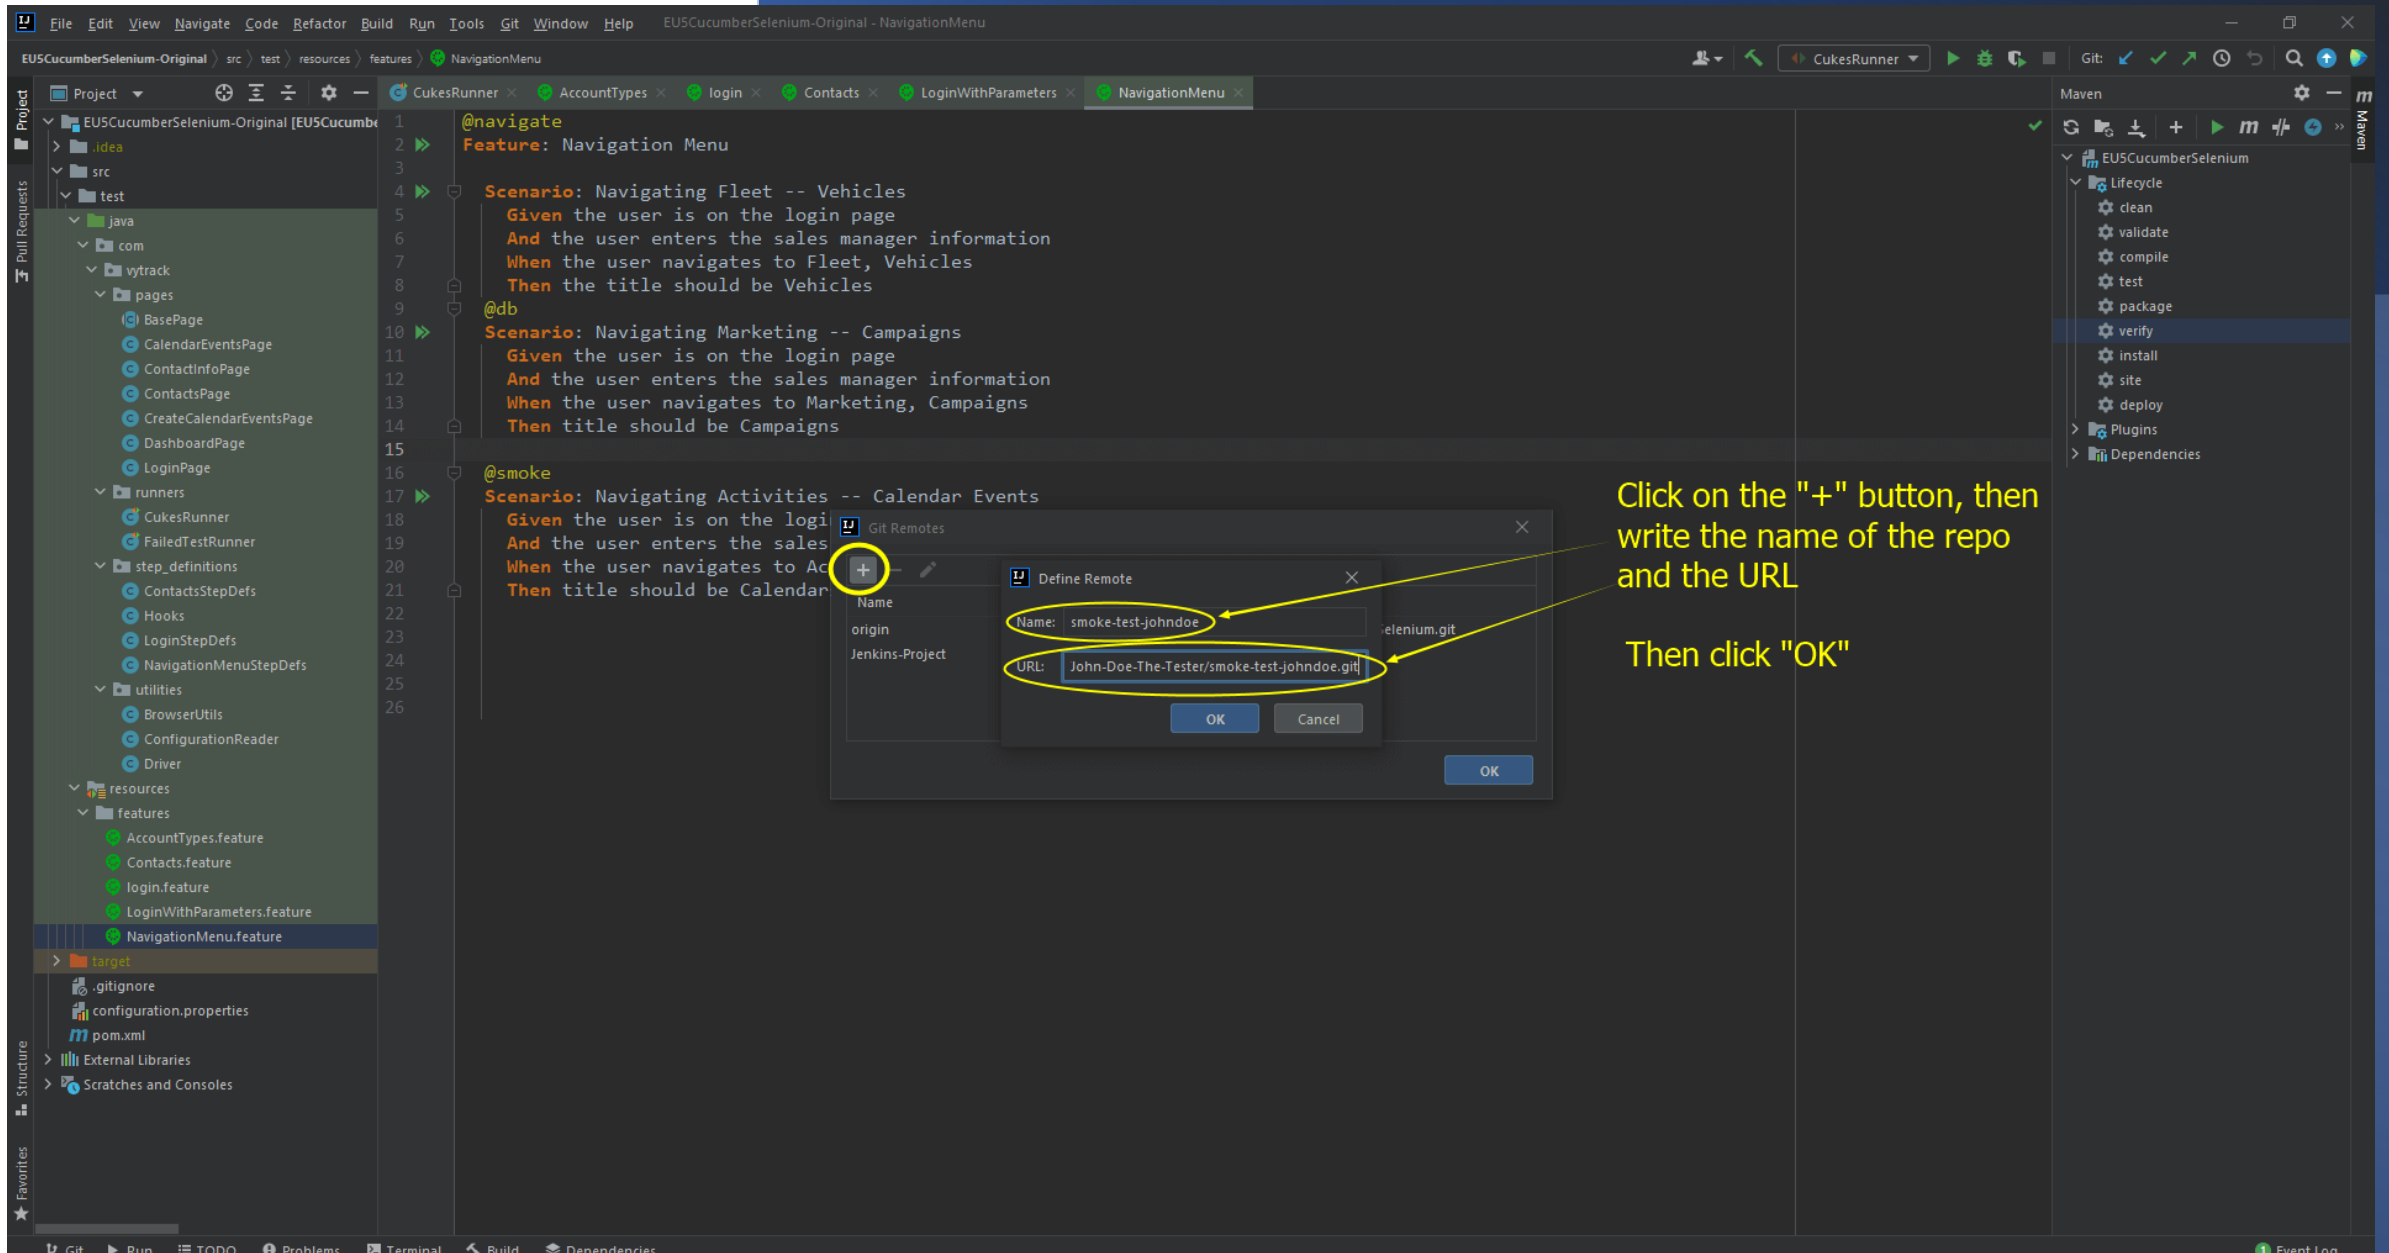

...or import code from another repository

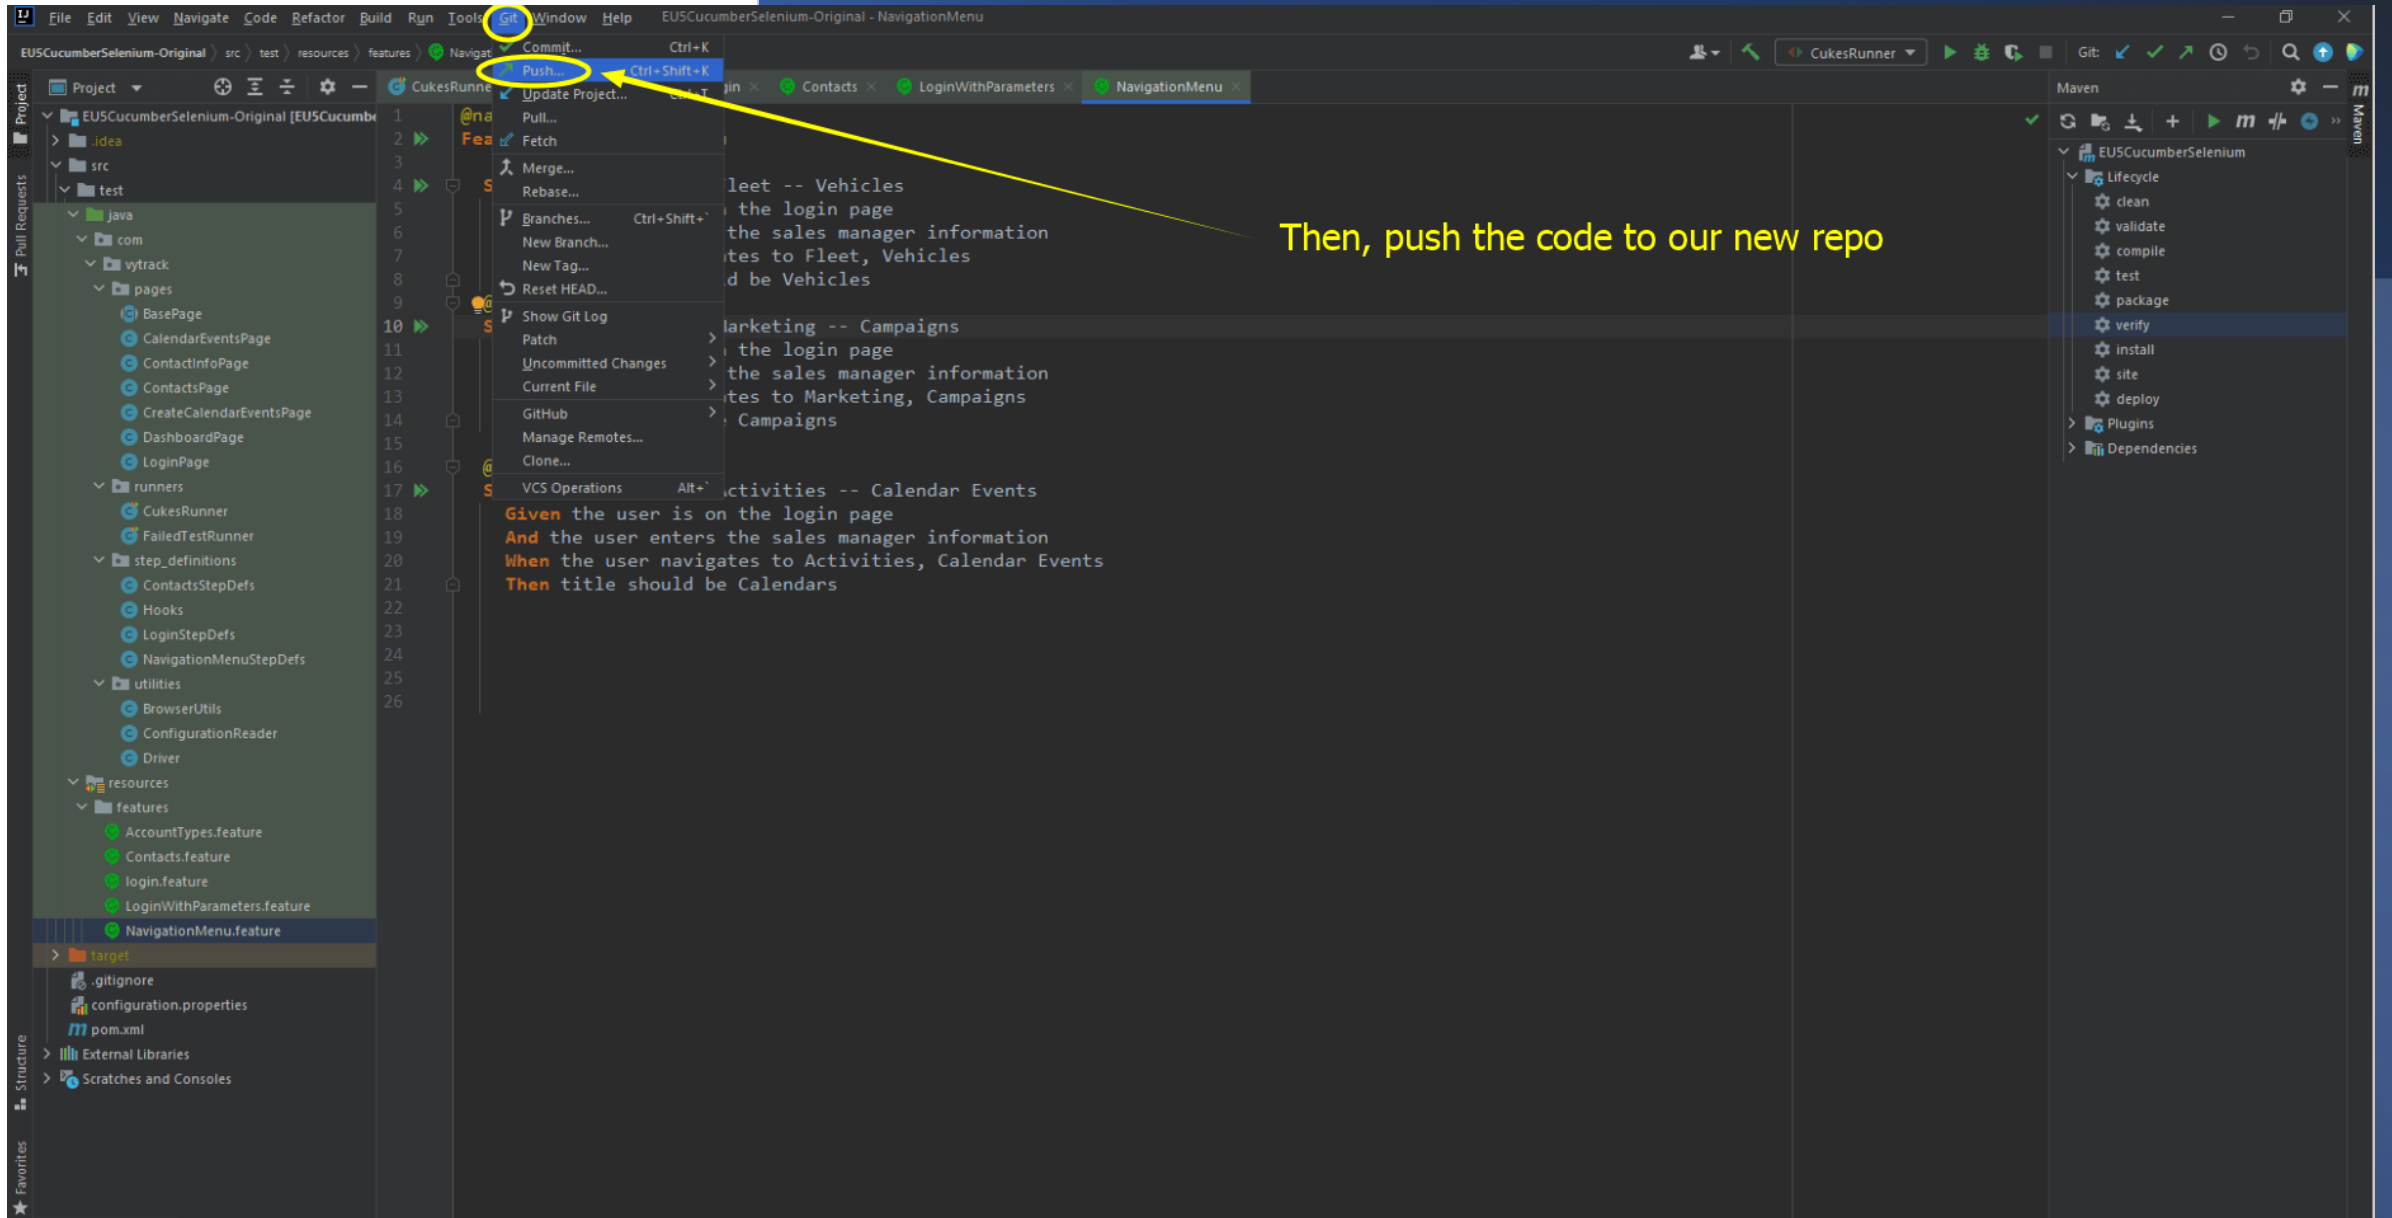

You can initialize this repository with code from a Subversion, Mercurial, or TFS project.

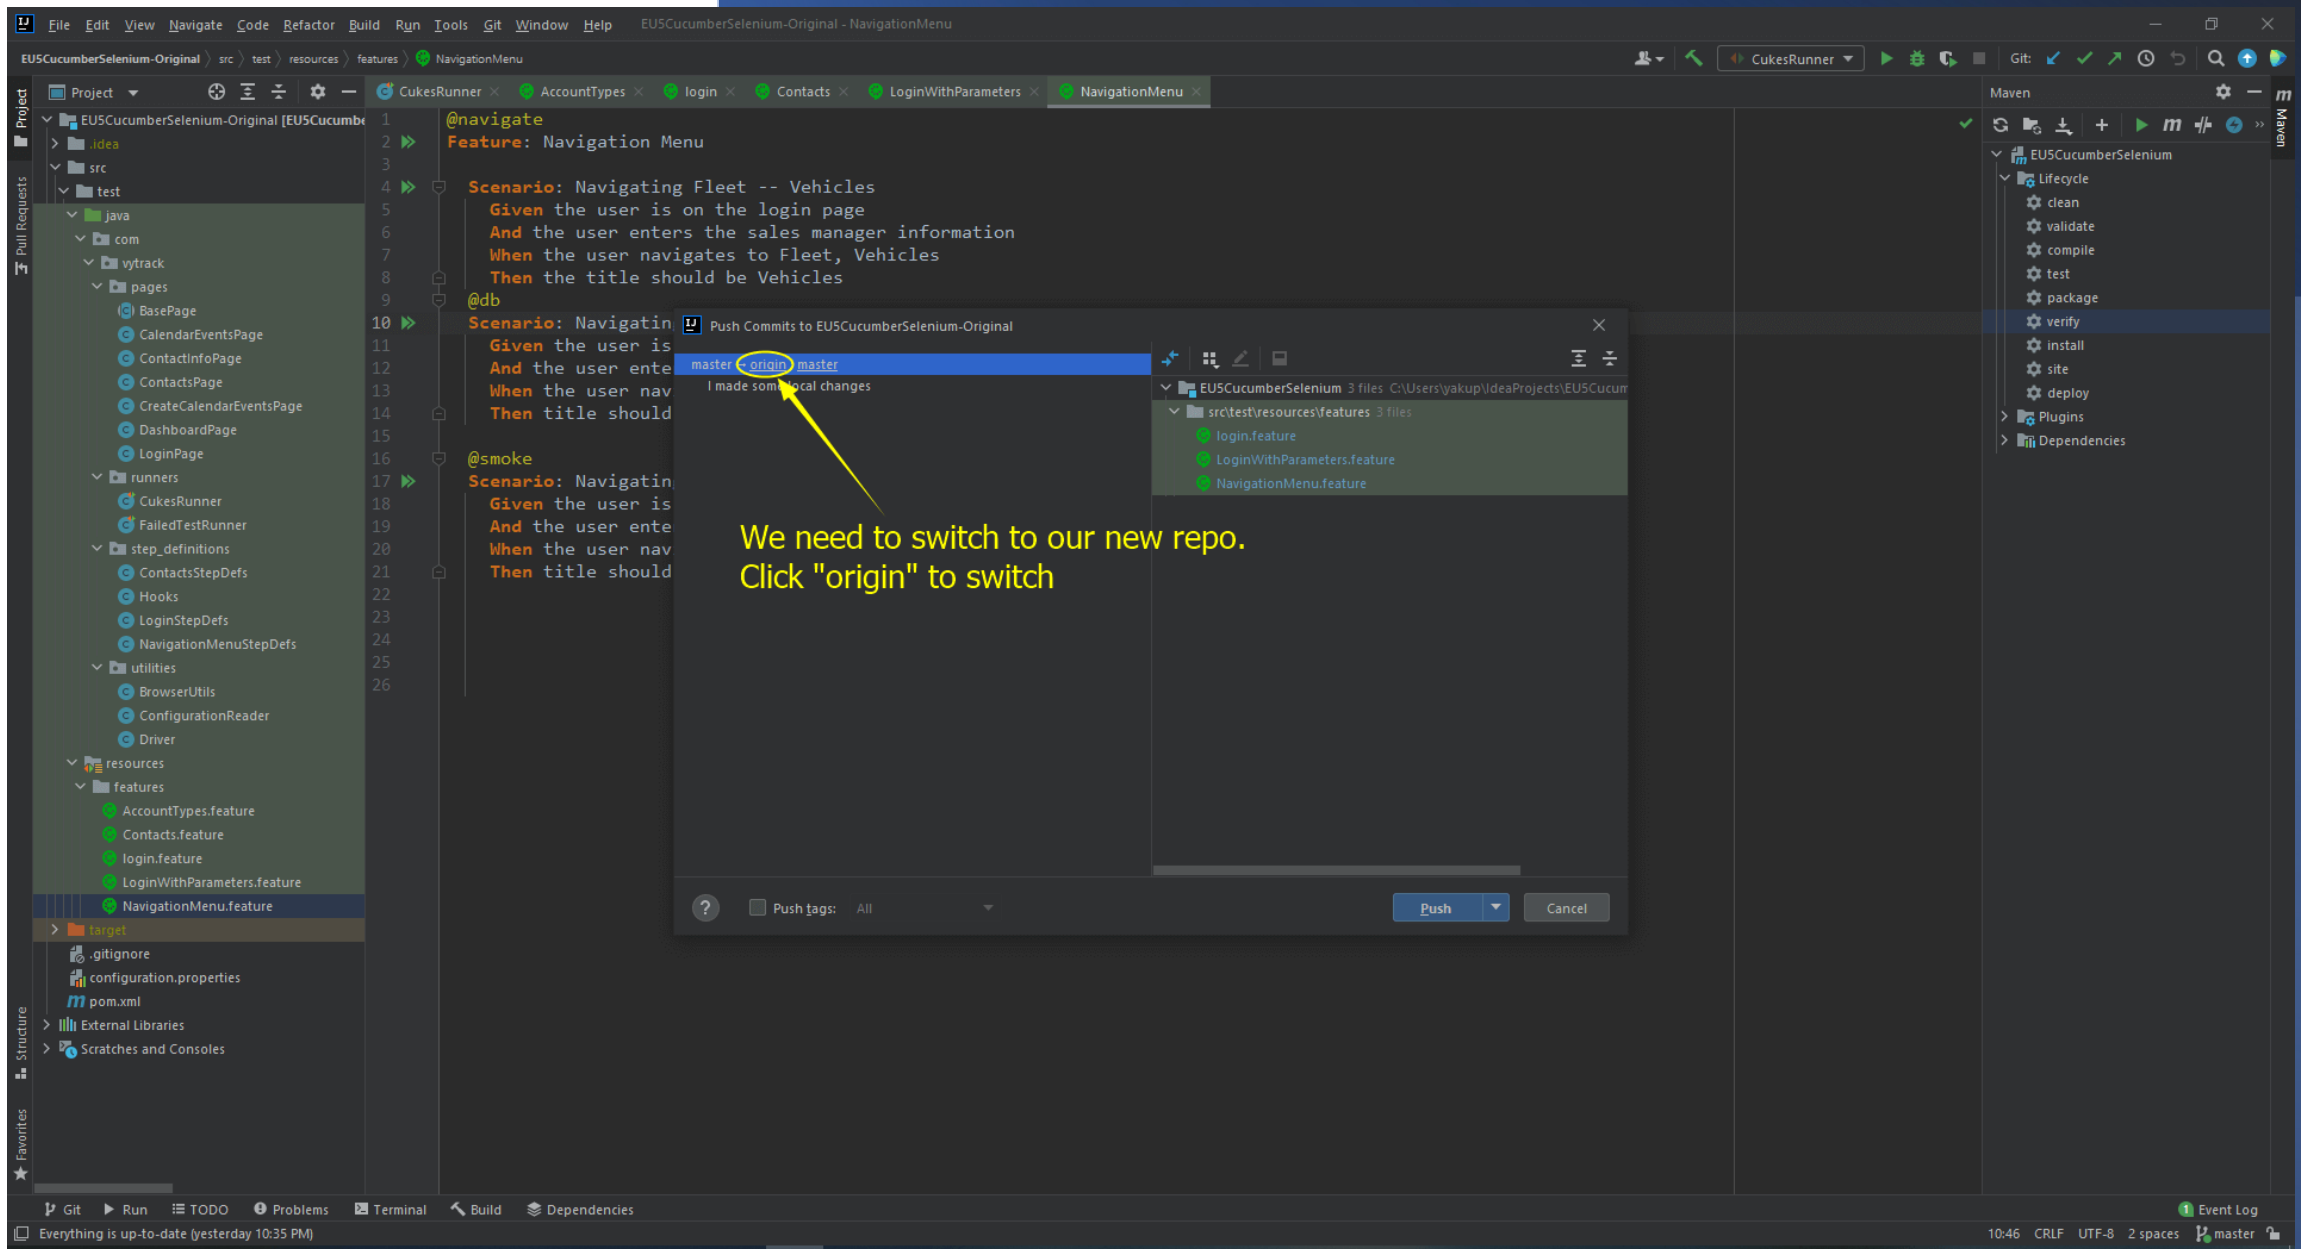

[Import code](#)

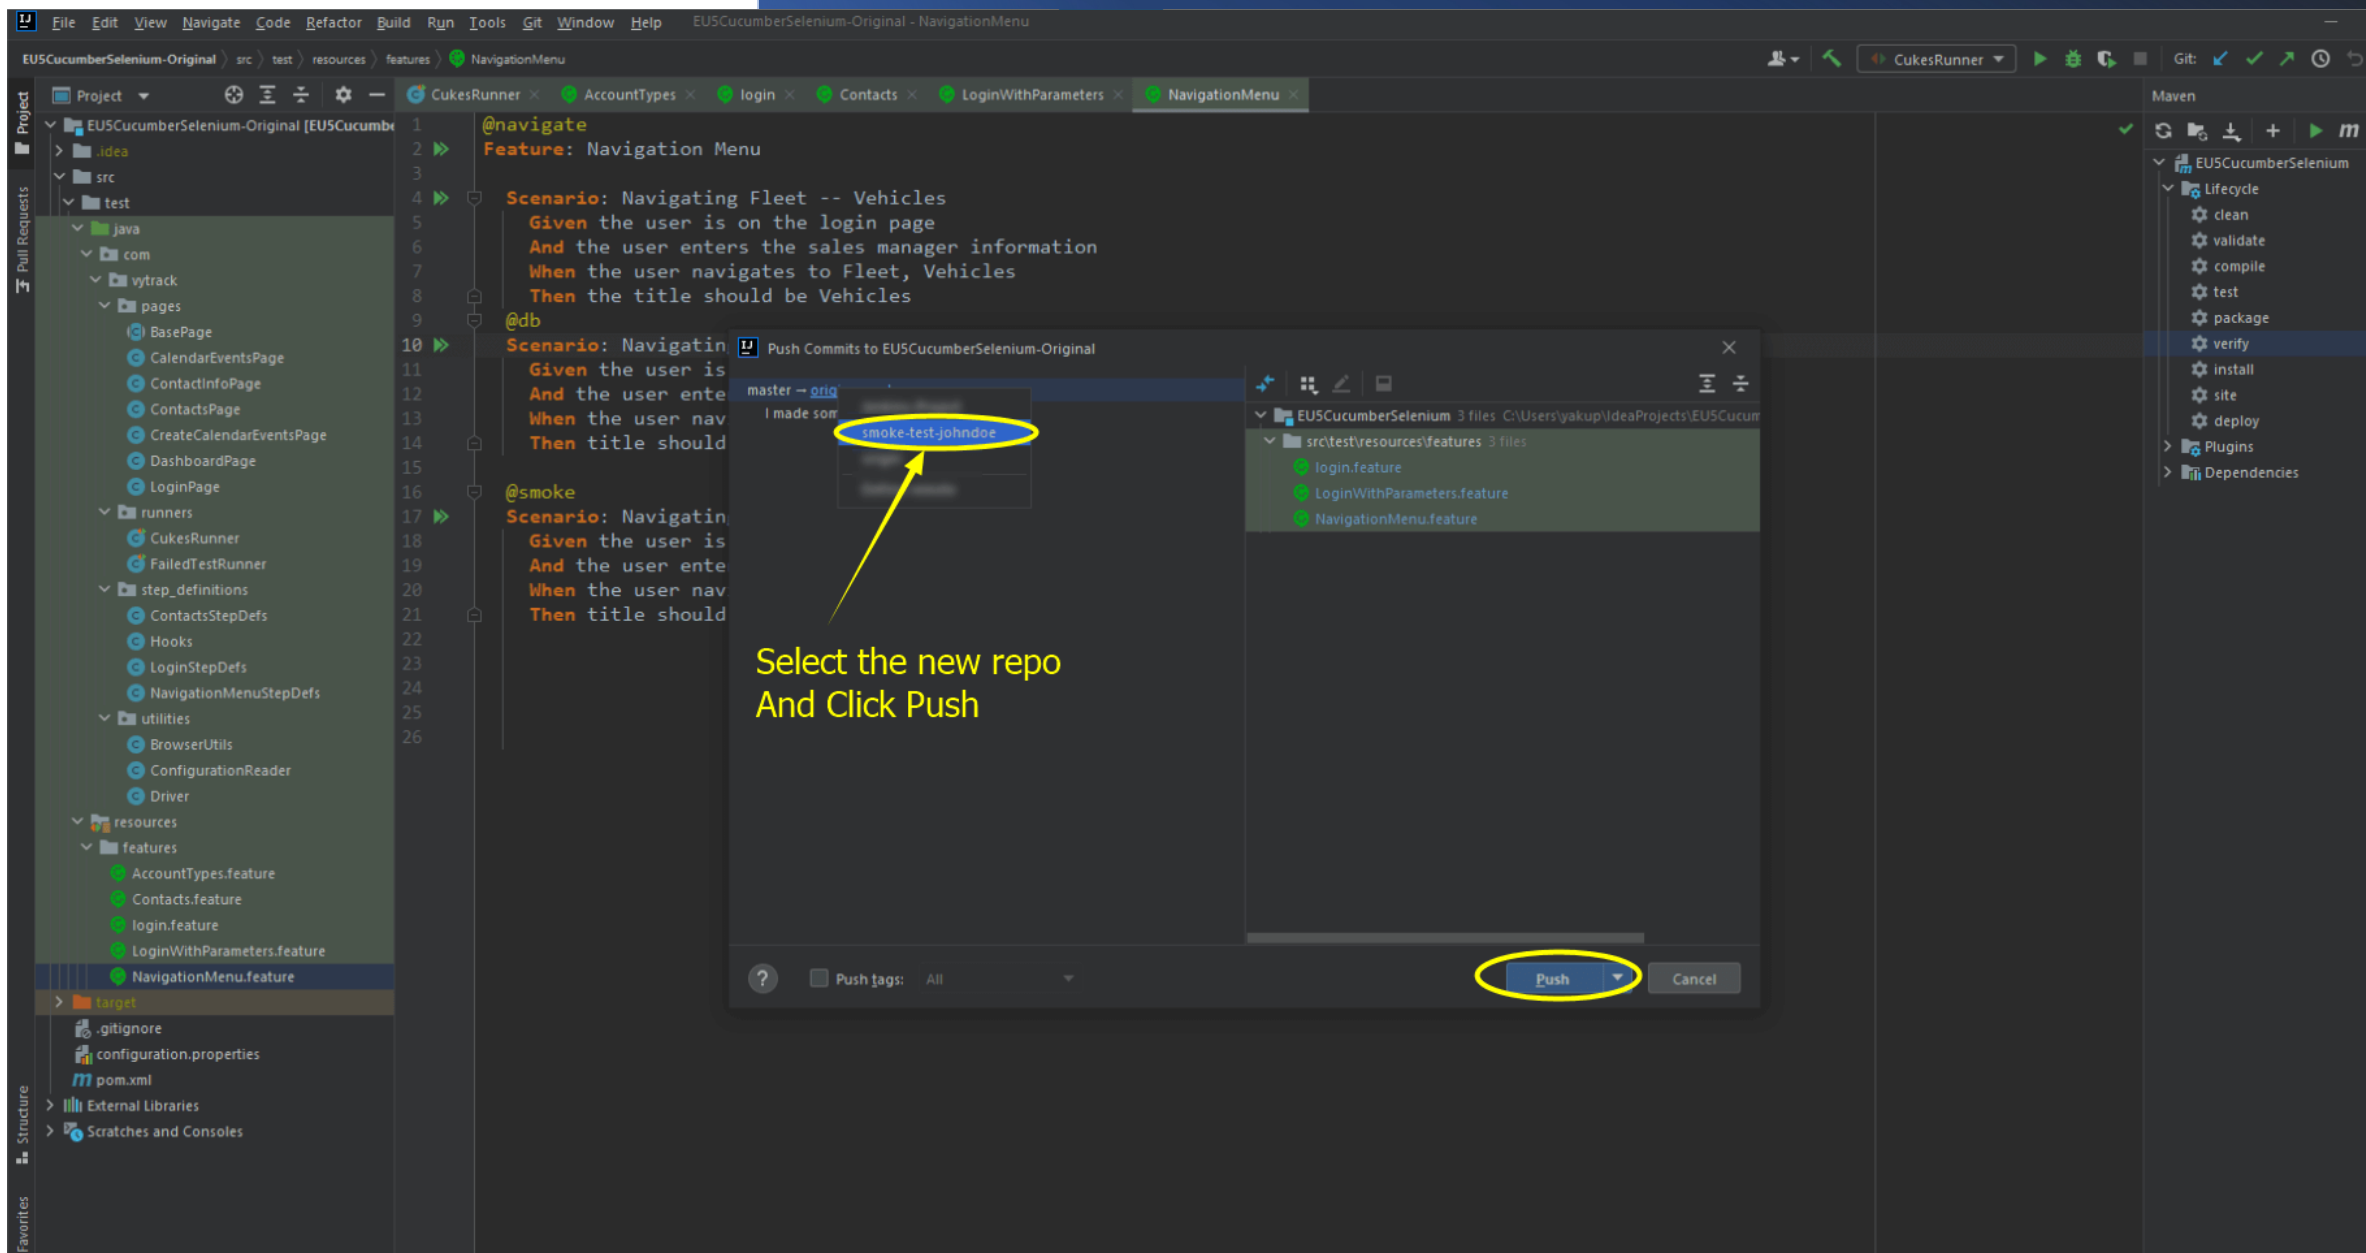

ProTip! Use the URL for this page when adding GitHub as a remote.

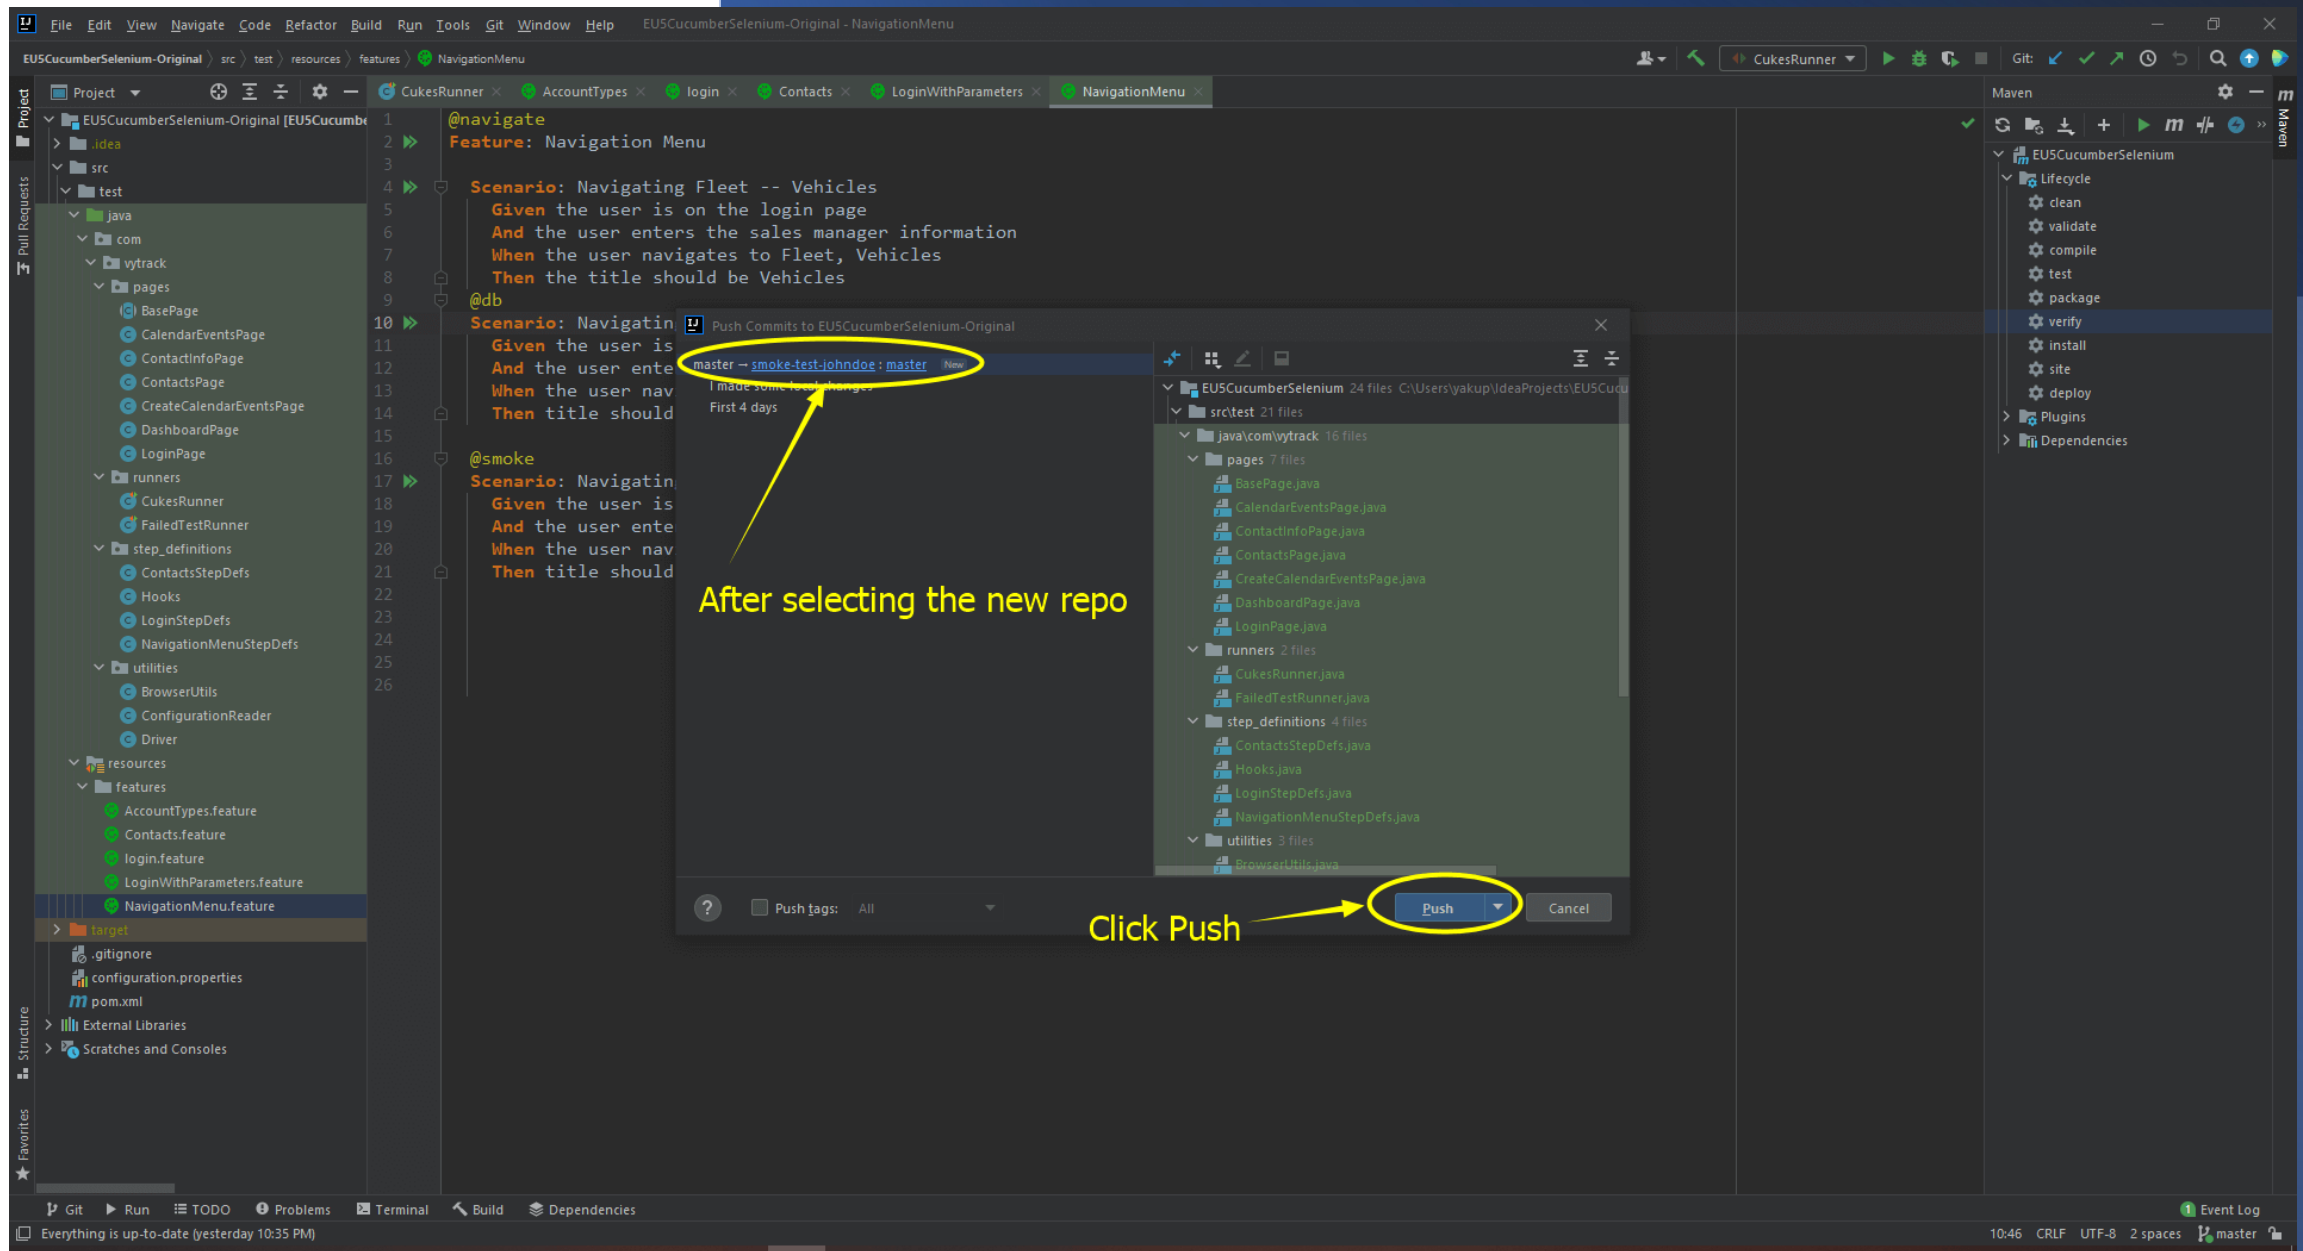

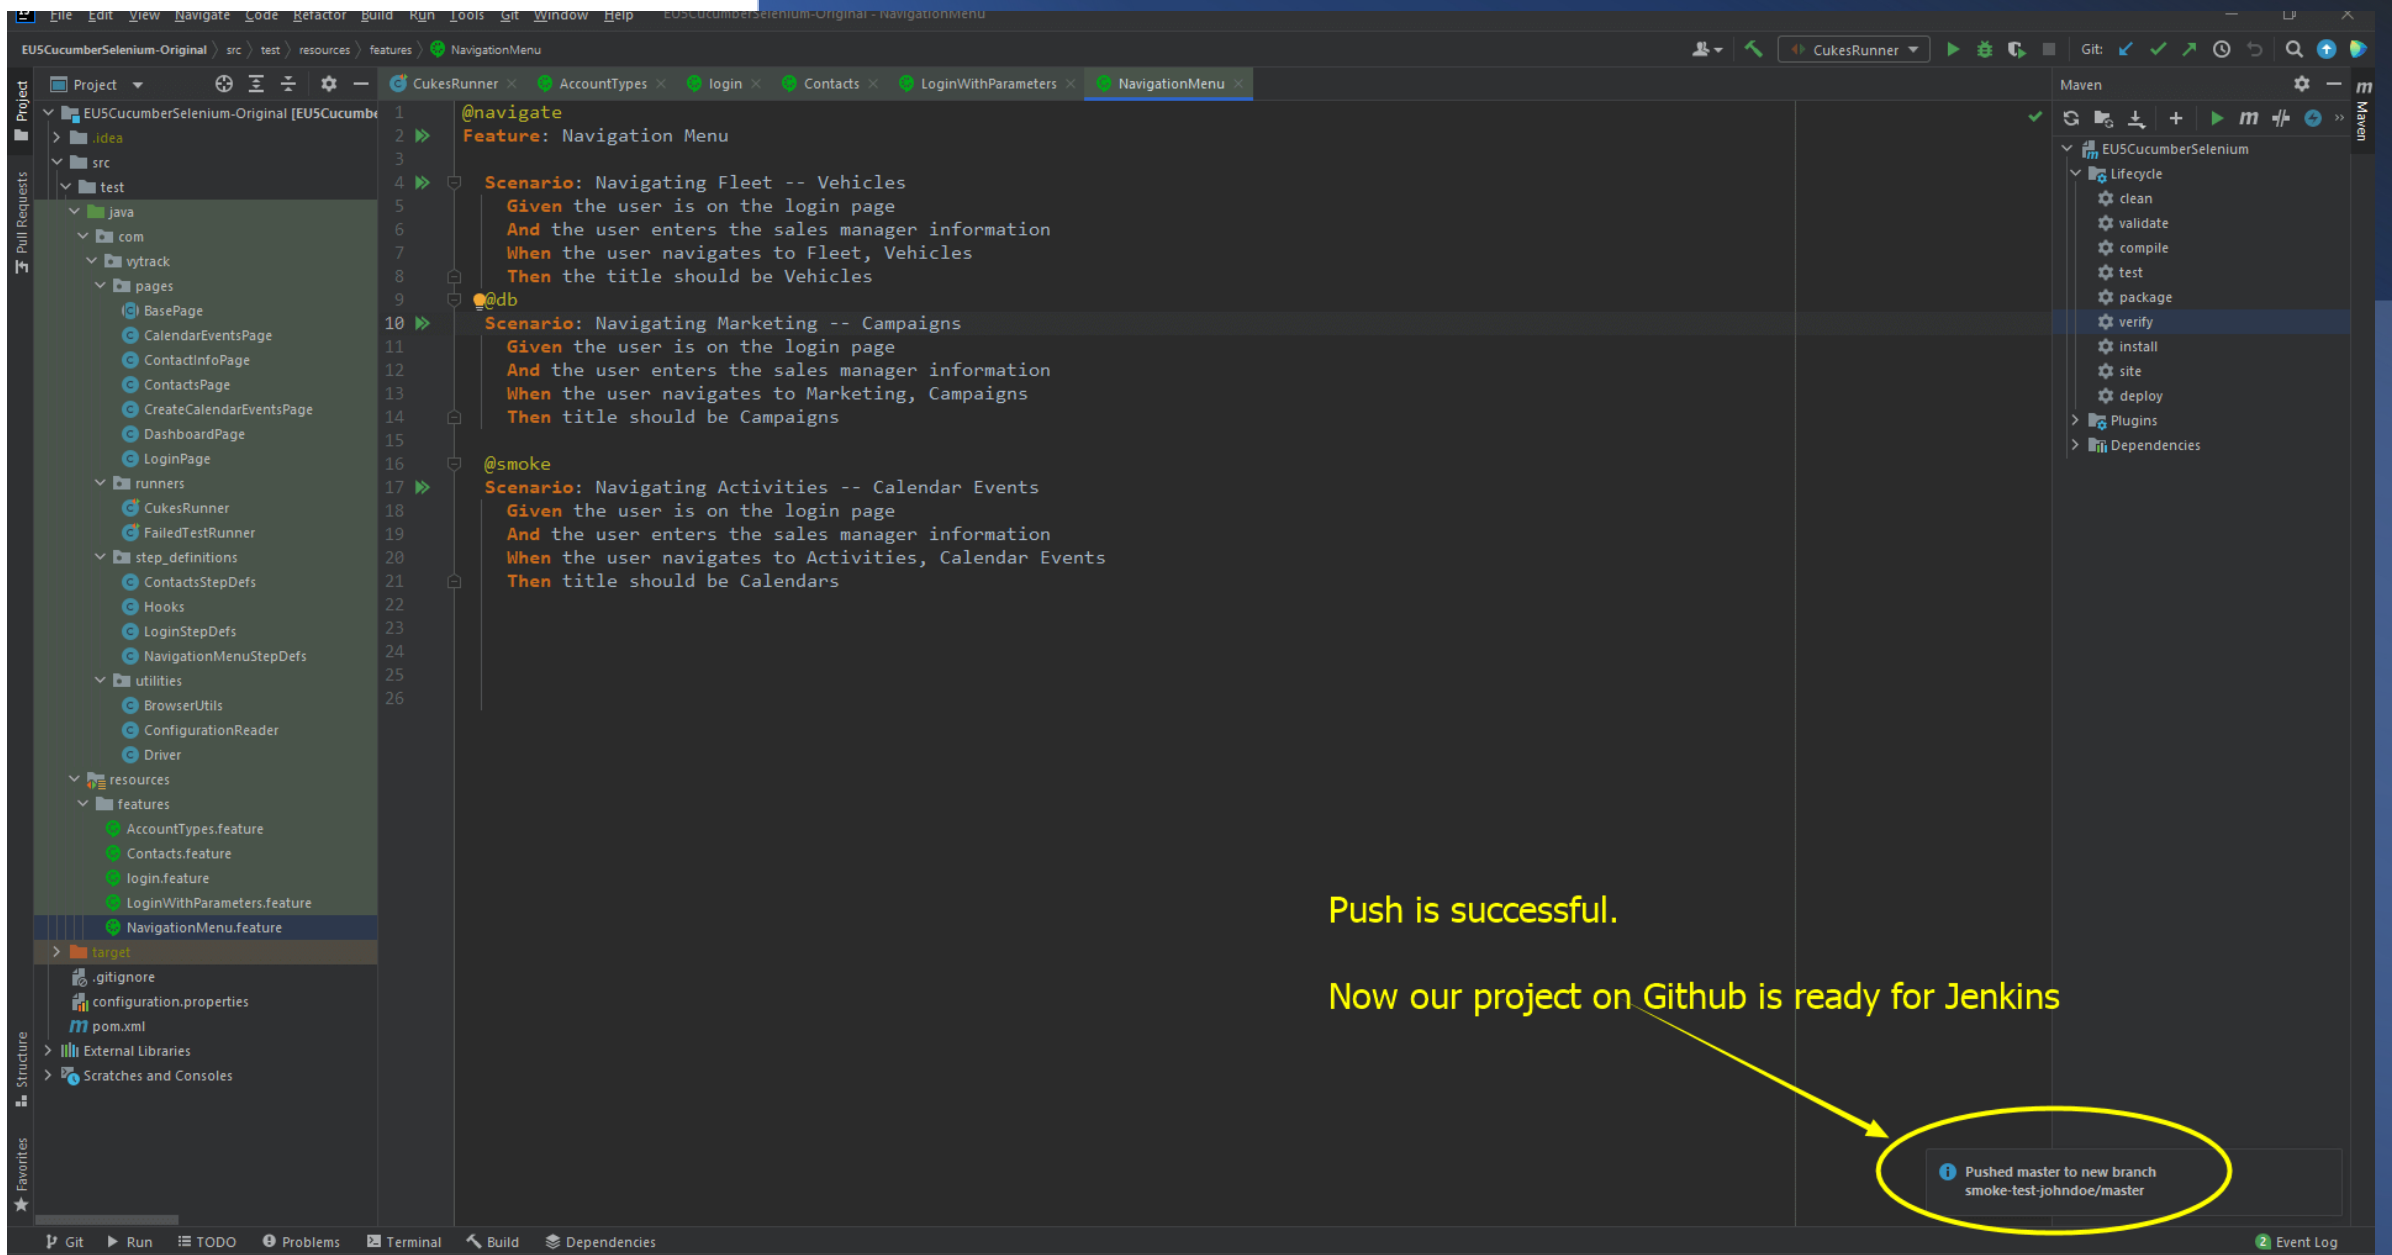

Push is successful.

Now our project on Github is ready for Jenkins
